Список таблиц

1 Цель работы

Получить навыки управления логическими томами.

2 Задание

1. Продемонстрировать навыки создания физических томов на LVM (см. раздел 15.4.1).
2. Продемонстрировать навыки создания группы томов и логических томов на LVM (см. раздел 15.4.2).
3. Продемонстрировать навыки изменения размера логических томов на LVM (см. раздел 15.4.3).
4. Выполнить задание для самостоятельной работы (см. раздел 15.5). ом.

3 Выполнение лабораторной работы

3.1 Создание физического тома

Сначала этой лабораторной работы я открыл терминал и получил полномочия администратора. Потом я открыл файл `/etc/fstab` с помощью текстового редактора `vim` чтобы комментировать строку, которая автомонтирует `/mnt/data` (рис. 3.1) потом я сохранил файл

```
vim /etc/fstab  
#  
:wq
```

```
root@localhost:~  
[qjarishekk@localhost ~]$ su -  
Password:  
su: Authentication failure  
[qjarishekk@localhost ~]$  
[qjarishekk@localhost ~]$ su -  
Password:  
[root@localhost ~]# vim /etc/fstab  
[root@localhost ~]# umount /mnt/data  
[root@localhost ~]#
```

Рис. 3.2: отмонтирование каталога /mnt/data

Затем я убедился что я правильно отмонтировал каталог (рис. 3.3).

Рис. 3.9: проверка создания физического тома

3.2 Создание группы томов и логических томов

Сначала я проверил доступность физическиз томов в моей системе (рис. 3.10).

pvs

A terminal window titled 'root@localhost:~' with search, menu, and close icons in the title bar. The terminal shows the command 'pvs' being executed, which displays a table of physical volumes. The table has columns: PV, VG, Fmt, Attr, PSize, and PFree. The data rows are: /dev/sda2 (lvm2, a--), <99.00g, 0; and /dev/sdb1 (lvm2, ---), 100.00m, 100.00m. The prompt '[root@localhost ~]#' is visible at the bottom.

```
[root@localhost ~]# pvs
PV          VG Fmt Attr PSize  PFree
/dev/sda2   rl  lvm2 a--  <99.00g    0
/dev/sdb1   lvm2 ---  100.00m 100.00m
[root@localhost ~]#
```

Рис. 3.10: проверка доступности физическиз томов

Потом я создал группу томов с присвоенным ей физическим томом (рис. 3.11).

```
vgcreate vgdata /dev/sdb1
```

A terminal window titled 'root@localhost:~' with search, menu, and close icons in the title bar. The terminal shows the output of the 'pvs' command, which lists physical volumes. Then, the 'vgcreate vgdata /dev/sdb1' command is executed, resulting in the message 'Volume group "vgdata" successfully created'.

```
[root@localhost ~]# pvs
PV          VG Fmt Attr PSize  PFree
/dev/sda2   rl  lvm2 a--  <99.00g  0
/dev/sdb1   lvm2 ---  100.00m 100.00m
[root@localhost ~]# vgcreate vgdata /dev/sdb1

Потом я создал логический том LVM с именем `lvdata`, который будет использо-
вать 50% доступного дискового пространства в грппу томов `vgdata` (рис. 3.13).

```
lvcreate -n lvdata -l 50%FREE vgdata
